

These semi-elastic flexible couplings are designed for general purpose use and permit quick and easy assembly by means of Taper Lock bush fixing.

Their characteristics are designed for use particularly on machinery driven from standard IEC electric motors.

Fully machined outside diameters allow alignment by simple straight edge methods.

Shaft connection is "fail safe" due to interacting dog design.

**SELECTION**

**(a) Service Factor**

Determine appropriate Service Factor from table below

**(b) Design Power**

Multiply running power of driven machinery by the service factor. This gives the design power which is used as a basis for coupling selection.

**(c) Coupling Size**

Refer to Power Ratings table below and read across from the appropriate speed until a power equal to or greater than the design power is found. The size of coupling is given at the head of that column.

**(d) Bore Size**

From Dimensions table on page 117 check that the required bores can be accommodated.

**EXAMPLE**

A shaft coupling is required to transmit 70kW between a 1200 rev/min diesel engine and a hoist running over 16hrs/day. Engine shaft is 70mm and the hoist shaft is 75mm.

**(a) Service Factor**

The appropriate service factor is 2.5.

**(b) Design Power**

Design power 70 x 2.5=175kW.

**(c) Coupling Size**

Reading across from 1200 rev/min in the speed column of Power Ratings table below, 251kW is the first power to exceed the required 175kW (design power). The size of the coupling at the head of this column is 230.

**(d) Bore Size**

The Dimensions table (page 117) shows that both shaft diameters are within the bore range available.

**SERVICE FACTORS**

SPECIAL CASES For applications where substantial shock, vibration and torque fluctuation occur, and for reciprocating machines e.g. internal combustion engines, piston type pumps and compressors, refer to your local Authorised Distributor. with full machine details for torsional analysis.	Type of Driving Unit					
	Electric Motors Steam Turbines			Internal Combustion Engines Steam Engines Water Turbines		
	Hours per day duty			Hours per day duty		
	8 and under	over 8 to 16 inclusive	over 16	8 and under	over 8 to 16 inclusive	over 16
<b>Driven Machine Class</b>						
<b>UNIFORM</b> Agitators, Brewing machinery, Centrifugal blowers, Centrifugal compressors†, Conveyors, Centrifugal fans and pumps, Generators, Sewage disposal equipment.	1.00	1.12	1.25	1.25	1.40	1.60
<b>MODERATE SHOCK*</b> Clay working machinery, Crane hoists, Laundry machinery, Wood working machinery, Machine tools, Rotary mills, Paper mill machinery, Textile machinery, Non-uniformly loaded centrifugal pumps.	1.60	1.80	2.00	2.00	2.24	2.50
<b>HEAVY SHOCK*</b> Reciprocating conveyors, Crushers, Shakers, Metal mills, Rubber machinery (Banbury mixers and mills), Reciprocating compressors, Welding sets.	2.50	2.80	3.12	3.12	3.55	4.00

\* It is recommended that keys (with top clearance if in Taper Lock bushes) are fitted for applications where load fluctuation is expected.

† For Centrifugal Compressors multiply Service Factor by an additional 1, 15.

**POWER RATINGS (KW)**

Speed rev/min	Coupling Size							
	70	90	110	130	150	180	230	280

Note: For details of HRC couplings suitable for application to drives involving SAE engine flywheels, consult your local Authorised Distributor.

Type B flanges can be supplied finished bored to H7 tolerance with keyway, if required.

Hub material: GG25 grey cast iron.
